SUPERSPEED DEVICE DESIGN BY EXAMPLE BY JOHN HYDE PDF

This is a "How-To" book which explains, with hands-on examples, how to design and implement a SuperSpeed USB peripheral that can interface to your hardware using a 32-bit 100MHz bus with standard or custom protocols. The book is based on the Cypress FX3 SuperSpeed Device and the firmware examples are written around a low-cost SuperSpeed Explorer board and a companion CPLD board which are available from www.cypress.com/fx3book. The software examples are written for the Windows operating system and the CPLD examples are written in Verilog. The source code for all of the examples is downloadable from the book web site. If you currently think that SuperSpeed USB design is only for the elite then look inside this book and discover that SuperSpeed technology has now been made accessible to the rest of us!

This book is definitely worth the price.

By RKD

I am about half way through John Hyde's book and I have learned a lot about the FX3. The examples alone make the book worth the price. I also got the EZ-USB FX3 Superspeed Explorer Kit and the companion CPLD board which are a great bargain. The book and boards will show you everything you need to know to get a USB 3.0 application up and running. Cypress provides all of the software to construct a complete development environment FOR FREE. If you have the need to develop a USB 3.0 SuperSpeed device, this is definitely the cost effective way to get started and get done fast. Buy this book and the EZ-USB FX3 Superspeed Explorer Kit now.

Good companion to use with the Cypress eval board.

By H. Stewart

This is a good guide to use with the Cypress eval board.It will get you and running quickly. As a guide it will

give you a good foundation so when you dive into the data sheet and app notes you have a good idea of what you are looking for.
